In modern high pressure boilers, power plant chemistry plays a significant role for keeping boiler and turbine in healthy condition. Water quality has direct impact on performance of turbine, condenser cooling system and may cause boiler tube failures (due to corrosion, deposition); condenser tube leakages and scaling etc. Thus, it is felt necessary to conduct an external audit of Cycle water chemistry including coal analysis to assess the prevailing overall practices of DVC chemistry department, reporting systems etc. Audit team will analyse the gap and will suggest remedial measures for bridging	DVC/Contract/Head Quarter/OS & U/CMM/Works and Service/00006 Date: 12-07-2021	25,00,000.00
